#### **DETAILED ACTION**

#### Response to Arguments

Applicant's arguments filed 01/24/2005 have been fully considered but they are not persuasive. In Fig. 7 of Pet et al. it is disclosed a silicide layer 16 that is aligned between the isolation region 2 and the spacer 10.

## Allowable Subject Matter

1. Claims 3, 7, and 9-12 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 2, 4-6 and 8 rejected under 35 U.S.C. 103(a) as being unpatentable over Sun (5,899,742) in view of Pey et al. ((6,025,267)

Regarding Claims 1, 2, 4-6 and 8, Sun discloses a manufacturing method for self-aligned local interconnects and contact simultaneously where in Figs. 3F and 3H, layer 31 is isolation region, formed in semiconductor substrate 30, gates 34a and 34b are formed over the substrate, and source/drain regions 36 are formed at both sides of the gates, layer 44 is protective insulating

Application/Control Number: 10/750,983

Art Unit: 2826

layer formed on the isolation region 31, , layers 42a, 42b, and 42c are silicide layers and 37a, 37c, 37c and 37d are the sidewall spacers. Sun fails to disclose the alignment structure of the silicide layer with respect to insulation layer and spacer. However, Pey et al. disclose a silicon nitride-TEOS oxide, salicide blocking layer for deep sub-micron devices where in Fig 4 – Fig 7, the alignment structure of the silicide layer 16b with respect to isolation region 2 and spacer 10.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required alignment structure of the silicide layer in Sun as taught by Pey et al. in order to have a semiconductor structure with higher reliability.

#### Conclusion

4. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
